

Bruce Rehlaender, Ph.D.

Principal, CMC

Bruce is an expert in bioavailability optimization, formulation of poorly soluble drugs, lyophilized product development, and particle size analysis.

He has over 25 years of experience in pharmaceutical research and development, primarily in the arena of formulation development. He has worked with both small and large molecules and has developed products for oral, parenteral, topical, pulmonary, intranasal, and intrauterine delivery. His areas of expertise include bioavailability optimization, formulation of poorly soluble drugs, lyophilized product development, and particle size analysis. Dr. Rehlaender also has extensive experience in process development, including lyophilization and sterilization cycle development, and in manufacturing of clinical and commercial drug products. Bruce joined PharmaDirections in 2007.
