

Sara McKenzie, Ph.D.

Principal, Strategic Planning and Program Management

Sara is a Product Development expert with strong background in drugs, medical devices, proteins and vaccines.

She has over 30 years of experience leading teams in the development of products for the medical community. She has been employed by mid-size pharmaceutical as well as start-up biotech companies where she was responsible for managing multiple drug development projects from the discovery stage through Phase III trials and NDA submissions. Indications have ranged from heart disease and cancer to chronic obstructive pulmonary disease, erectile dysfunction, urinary incontinence, and asthma. Her career has also included work in medical devices and protein-therapeutics, vaccines and cancer diagnostics. Her expertise spans the range of experimental design, data analysis, manufacturing, clinical operations, and the business of science, all in the pursuit of improving the practice of medicine.
